HYALTO

THE CLOUD MONETIZATION PLATFORM TO EMPOWER THE ENTERPRISE

IT is your company's cloud service provider, delivering the services that empower your business to move forward.

vmware®

Centralize and Simplify

HyAlto centralizes the management of complex cloud environments into a highly customizable platform. Simplify cloud management by working from a single pane of glass, introducing automation, and offering a self-service portal for your organization.

Maintain Balance

IT is tasked with balancing business priorities against infrastructure, security and technical requirements. HyAlto's flexibility allows the delivery of cloud services to the organization without changing critical workflows designed to keep the infrastructure secure and responsive.

Know Your Numbers

As business grows, so do demands for increased services and scale with lower costs. Reconcile consumption metrics and accurately charge back to internal cost centers by tracking usage down to the employee level. Analyze historical data to assist in long range capacity and budget planning.

Introduce Self-Serve

Set up a catalogue of business ready, IT approved services to meet the needs of each department across the organization. HyAlto features a user friendly self-serve portal where new services can be requested as needed without involvement from IT.

Automate for Increased Efficiency

Alleviate the load on IT by letting automated provisioning bring new services online. This eliminates much of the manual work normally required to bring new services online, further lowers costs and gives IT the ability to focus elsewhere.
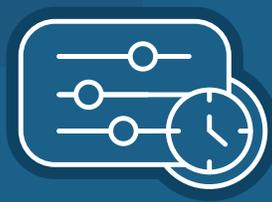

HYALTO

Self-serve Portal

Create and upload products and services into a user-friendly "storefront" where they are accessible to your organization. The portal is customizable to make it easy for different departments or roles to recognize what they need. Employees can access IT approved products or services 24/7.

Automated Provisioning

Once a request is made, automated provisioning brings new services online within minutes, significantly reducing fulfillment times. Deliver for your organization with increased agility while simplifying the process for your team. No changes in existing workflow required!

Metering & Usage

View usage & transactions down to the individual employee for each product or service to quickly reconcile and charge back to departmental and IT budgets. Plan and budget for future resource and infrastructure requirements based on historical data analysis. Further analyze the data to find efficiencies in resource utilization.
